

SHARP

Multifunction Copiers & Printers

Work smarter with Sharp

SMART

Leveraging the latest technology can help you get everyday tasks done with ease and efficiency—that's the key to business success.

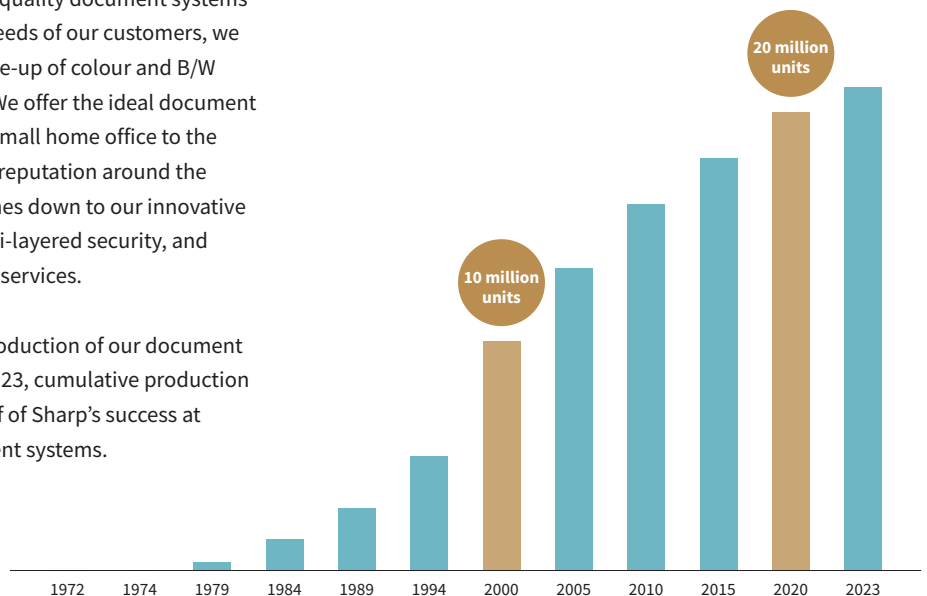

SEC

Information is one of our most valuable assets and needs to be safeguarded—security—that's the key to business success.

Global production reaches 21.1-million mark

Sharp has been producing innovative, high-quality document systems for over 50 years. Anticipating the diverse needs of our customers, we have continued to expand and refine our line-up of colour and B/W multifunction copiers and printers (MFPs). We offer the ideal document solution for any type of business, from the small home office to the large corporate setting. Sharp has earned a reputation around the world for helping people work better. It comes down to our innovative technologies, such as smart scanning, multi-layered security, and connectivity with mobile devices and cloud services.

Since the debut of our first copier, global production of our document systems has grown steadily. At the end of 2023, cumulative production surpassed 21.1 million units—ongoing proof of Sharp's success at offering reliable, high-performance document systems.

—whatever your business

VALUE

Business's greatest assets are guarded with the utmost care to propelling business.

CONNECTED

Interacting with others to get the job done regardless of time or space—that's the key to maximum value.

Contributing to the SDGs through business

In 1973, Sharp put into writing its business philosophy, which says the company will “contribute to the culture, benefits and welfare of people throughout the world” and that “our future prosperity is directly linked to the prosperity of our customers, dealers and shareholders.” These and other vows of the business philosophy share the aims of the Sustainable Development Goals (SDGs), which the UN enacted in 2015.

Under its business philosophy, Sharp carries out ESG management with a two-pronged approach: creating solutions to social problems through business and technological innovation, and reducing social and environmental impact through sustainable business activities. This approach will help achieve the SDGs and thereby contribute to a sustainable and better world where no one on Earth is left behind.

Providing smarter, more secure office solutions

The MFP was once a machine used only for managing paper-based information. But as working styles have evolved, the MFP has transformed into a comprehensive business tool that supports a range of tasks involving cloud-based data. Seamlessly boosting efficiency for workers in the office and beyond, Sharp MFPs and other office hardware have become indispensable to countless organisations. We aim to contribute to society by enhancing workspace environments through total solutions that improve the way people get their essential jobs done.

SMART

STREAMLINE DAILY OFFICE TASKS

When you're on the go and away from your usual desk, there are only so many paper documents you can keep on hand. To solve this problem, use an MFP to scan paper-based documents into digitised form. That way, they're easy to share with others working remotely. The MFP also lets you use text from paper documents as digital data. Now's the time to improve efficiency by embracing new ways of working.

Easy Scanning

Tap on the LCD touchscreen's Auto Set button to have the MFP perform a host of actions automatically. It can skip blank pages in a multi-page document or reorient pages mixed in upside down. The MFP also uses AI and image-processing technology to automatically determine the optimal resolution, gradation, and compression rate for your scan jobs.

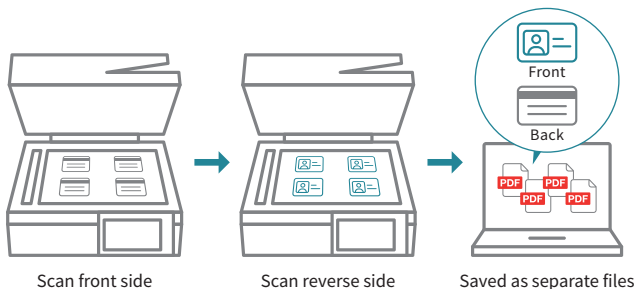

Multicrop / Image Crop

Multiple receipts, photos, and other items can be scanned all at once, with each one saved as a separate file. This helps you streamline the filing of receipts and bills. The MFP can also crop photos from documents such as magazine pages and save them as individual files.

Card Shot (Multi)

Scan up to four ID or credit cards at once, turn them over, and scan the reverse sides. For each card, a separate file is created that includes the front and reverse sides.

Business Card Feeder

A dedicated feeder on the DSPF/RSPF automatically feeds in and scans batches of business cards.

OCR

OCR (optical character recognition) capability on the MFP lets you convert a scanned document into a searchable PDF file or into an editable Office Open XML (pptx, xlsx, docx) file.

Business Card Management

The MFP reads the contact details on a business card via OCR and then exports these to your chosen contact management system.

USB Direct Scan

You can scan documents directly to a USB drive inserted into the MFP.

USB Direct Print*

Insert a USB drive into the MFP and a command screen will automatically pop up on the LCD. Right away you can print files from the USB drive, which are displayed as thumbnails.

*Direct printing of PDF files requires PostScript compatibility. Direct printing of Microsoft Office files requires Direct Print compatibility. Contact a Sharp customer representative to see if these functions are available on your MFP or if you need additional equipment.

Network Print

Network printing allows you to print documents from anywhere, simply by connecting to the office network via the internet. This comes in handy when you need to print from a remote location.

Office Direct Print*

Print common Microsoft Office files without using a PC. With the MFP, you can print a Word, Excel, or PowerPoint file directly from a mobile device, cloud service, USB drive, or file server.

*The actual printout may look different from what is displayed on the computer screen. This function is enabled via Qualcomm® DirectOffice™ technology.

ID Card Copy

The MFP lets you easily copy both sides of an ID card or credit card onto a single page.

Eco Packaging

Sharp has reduced plastic waste by using recyclable corrugated cardboard instead of polystyrene foam for the MFP's packaging.

EVEN MORE FLEXIBILITY

Work styles are changing, and offices are going paper-less. But businesses still need paper documents. And companies often need to produce flyers, direct mail, and business proposals in-house. With a Sharp MFP, creating professional-looking documents is a breeze. Now's the time to make a Sharp MFP a reliable partner in your office.

Saddle Stitch Finisher

This unit automates time-consuming tasks such as stapling, saddle-stitch binding, hole punching, and folding. It can also trim the edges of saddle-stitched documents to a beautifully consistent finish. You get seamless output—from printing to finishing—of leaflets, brochures, business proposals, and office meeting materials.

Note: Stapling requires a separate stapler, and hole punching and trim functions each require a separate module option.

Stapling

4-hole wide punching

Trimming

Saddle Stitching

Saddle stitching

Folding Unit

This unit performs various types of automated folding*, such as Z-folds and C-folds, so you can efficiently produce direct mail and other items.

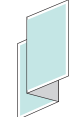

*Available fold types vary depending on the MFP model. Please refer to the leaflet for your chosen model. For certain types of folding, the MFP model will require a separate finisher option.

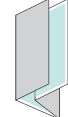

Z-fold

C-fold

Accordion fold

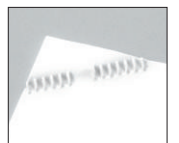

Double fold

Half-fold

Stapleless Stapler / Manual Stapler

Besides the conventional automated stapling function, the finisher offers two other ways to bind multi-page documents. You can either use the manual stapler to staple documents or the staple-free stapler to crimp the corners of pages together.

Staple-free stapling

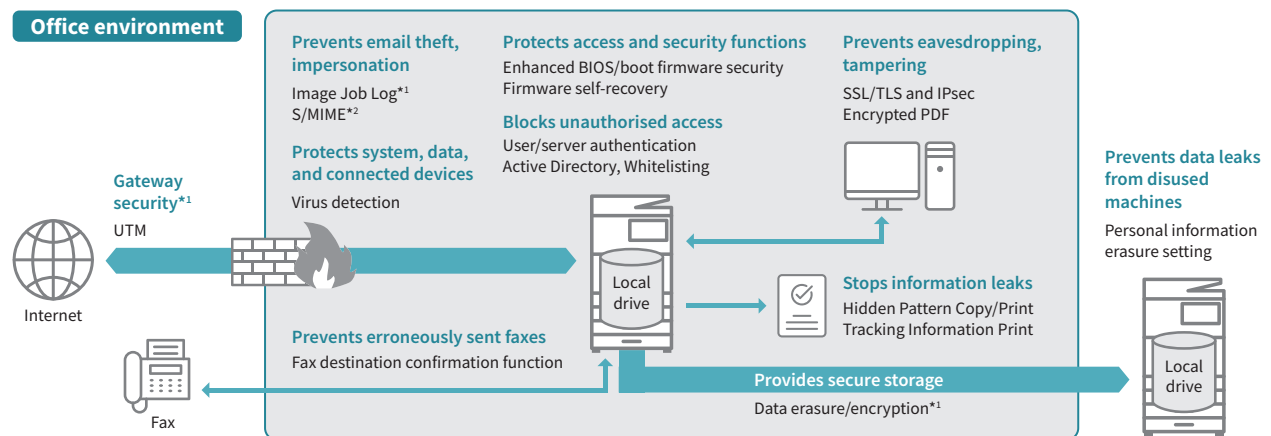

Continuous Run

Thanks to an intermediate toner hopper, there's no need to stop the MFP during large-volume copy/print jobs when the toner cartridge needs changing. The MFP can use toner from the toner hopper to continue printing while the empty toner cartridge is replaced with a new one.

SECURE

SEAMLESS SECURITY

With advancements in information technology come threats such as computer viruses, information leaks, and unauthorised access. Dealing with these wide-ranging threats is one of the most pressing issues for business today—which is why MFPs should be treated the same as other IT equipment. Sharp MFPs reduce all sorts of security risks by, for example, blocking unauthorised access and preventing information leaks from printouts or storage media. Now's the time to build a safer and more secure business environment with a Sharp MFP.

*1: Contact a Sharp customer representative for details on activating these functions. *2: Only when emailing scanned data.

BIOS/Boot Firmware Security

When booting up, the MFP checks for any anomalies in the BIOS/boot firmware. If it finds a problem, it aborts the startup. If there are other firmware-related issues, the MFP will attempt recovery to protect the system.

Virus Detection

Using the Bitdefender scan engine, the MFP defends against virus attacks on itself and connected devices. It scans for viruses and prevents the MFP from transmitting them to other devices like laptops and PCs.

Remote Firmware Updates

The MFP's firmware can be remotely updated—without the need for service operation—via a firmware update service, so you're always using the latest system for your MFP.

AD Group Policy Device Management

Group Policy enables centralised management of Windows PC settings within an Active Directory (AD) domain. System administrators can use it to simultaneously configure printer, proxy, and security settings for users and PCs.

Mandatory Access Control

This function protects the MFP from fraudulent programs trying to access the file system and obtain information.

Image Job Log*

This function creates and externally stores an image file (PDF) and a log file (XML) for each job. This helps identify unauthorised use of the MFP.

*Contact a Sharp customer representative for details on activating this function.

Server Authentication

The MFP supports external server authentication functions such as LDAP and Active Directory. With centralised management of multiple user credentials, system administrators can track usage of multiple MFPs.

S/MIME*

The MFP supports email encryption and digital signatures. Sending emails in encrypted format keeps data from leaking. It also prevents someone from masquerading as the sender or altering the content of an email.

*Only when emailing scanned data.

Data Encryption / Automatic Erasure*

Job data is encrypted before being saved to the MFP's internal storage. Once the data is output or sent, it is automatically erased.

*Contact a Sharp customer representative for details on activating this function.

SSL/TLS

SSL/TLS certificates encrypt transmitted data to prevent leakage and tampering, while ensuring that data is transmitted privately.

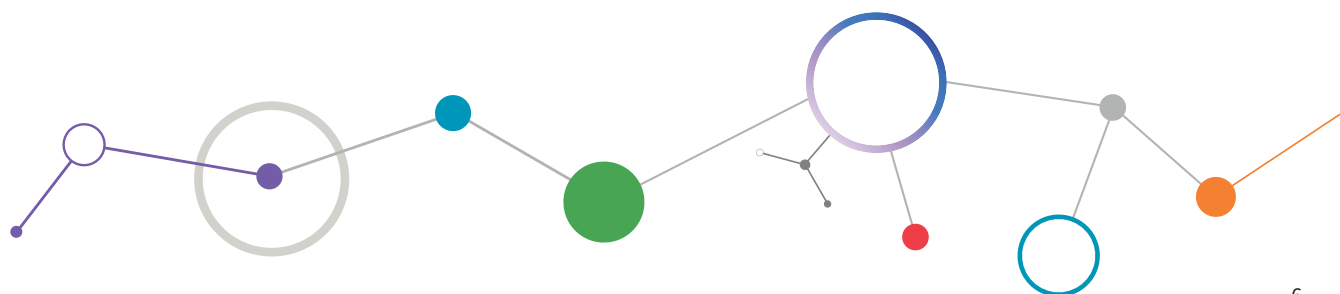

Trusted Platform Module

TPM is an industry-standard chip that uses cryptoprocessor technology to protect hardware such as MFP hard drives. It generates a cryptographic key that can't be accessed by software, with a matching key encoded during boot-up. If the two keys don't match, access to the device is denied. TPM is vital for shielding your network from data storage attacks.

Document Control

This function prevents unauthorised use of confidential documents* by embedding copy-prevention data in them.

*May not work with certain types of paper, documents (such as those with a lot of photos), or MFP settings.

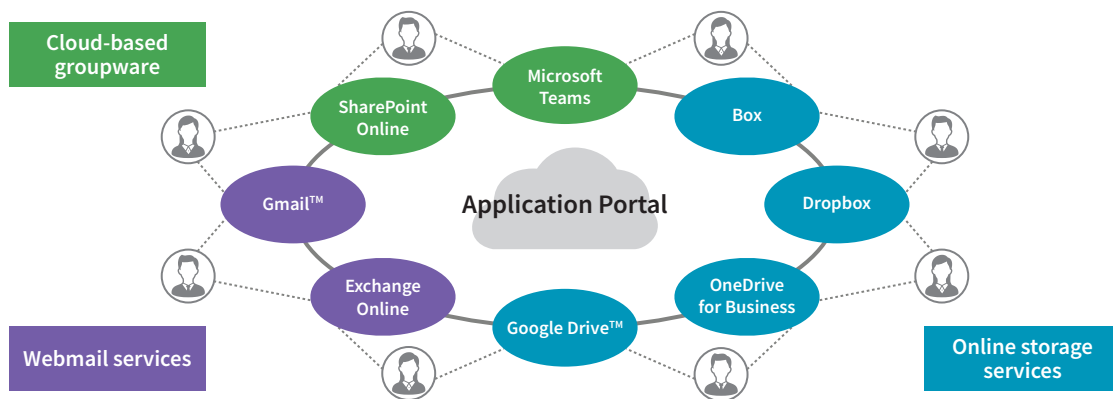

CONNECTED

LINK TO CLOUD SERVICES

Make sure you and your co-workers can access each other's digital and hard-copy information, so you can maximise teamwork and creative collaboration. Use the MFP to swiftly scan documents and upload them to cloud services for sharing with your team. View, edit, and print documents regardless of whether you're inside or outside the office. Now's the time for smart information sharing, with a Sharp MFP.

Cloud Storage Connection

Directly from the MFP's control panel, you can connect with cloud services and upload scanned data to them or print directly from them. Supported services*¹ include Google Drive™, OneDrive for Business, SharePoint Online, Box, and Dropbox. Apps for these services can be downloaded and installed on your MFP via Sharp's Application Portal*². App updates are easily recognisable, so you'll always be up to date with the latest services. Once you log in to the MFP, its single sign-on feature allows you to quickly access multiple software services without having to sign in to each one separately.

*¹ Some services are not available on some models. Contact a Sharp customer representative for details.

*² Contact a Sharp customer representative for details.

Teams Connector

This feature streamlines workflow and enhances collaboration in your team. You can easily print from Teams channels and folders and scan documents to them too.

Cloud Mail Connection

Scanned data can be conveniently sent via your regular Gmail™ or Microsoft Exchange/Online account.

LINK WITH MOBILE DEVICES

Companies are supporting diversified work styles for their employees. Mobile devices like tablets and smartphones are now indispensable to doing business. Swiftly linking MFPs with mobile devices streamlines complex, time-consuming workflows and gives easy access to data on devices. Now's the time to streamline tasks and create further value.

Mobile Print

Sharp MFPs and printers support popular mobile printing services* such as AirPrint and Sharp Print Service Plugin.

*Some services are not available on some models. Contact a Sharp customer representative for details.

Sharpdesk Mobile*

Mobile devices installed with this print/scan app can connect directly to the MFP for printing or downloading scanned data. To connect, simply hold your mobile device over the MFP's NFC tag or scan the MFP's QR Code.

*Availability varies by country/region. For details, see the Sharpdesk Mobile support website: https://global.sharp/products/copier/docu_solutions/mobile/sharpdesk_mobile/ Some functions may require optional equipment, depending on the MFP model. Please refer to the relevant product brochure.

SMOOTHER ADMIN WORKFLOW

Sharp MFPs make life easier for system administrators by supporting a range of management tasks. The seamless functionality of our MFPs brings a new level of control and convenience. Along with connection to mobile devices and external cloud services, Sharp MFPs boast an array of smart functions to boost your workflow.

Print Release*

This lets you send documents to the main MFP, which acts as a server and stores them for printing out from any other compatible MFP on the network. This function comes in handy when the main MFP is in use or under maintenance, letting you finish your job with minimal waiting.

*Contact a Sharp customer representative for details on the recommended maximum number of connectable MFPs.

Sharp OSA (Open Systems Architecture)

Linking MFP functions with third-party applications automates entire tasks, covering everything from input and processing to output, and boosting work efficiency.

Remote Operation

Using the Sharp Remote Front Panel feature, helpdesk and admin staff can access and control the Sharp MFP from a remote PC workstation.

eSF (Embedded Solutions Framework)

eSF allows users to accomplish a variety of tasks from the MFP/printer through an intuitive Java-based platform. It boosts user productivity by streamlining or eliminating paper-intensive work processes.

Enhanced Reliability

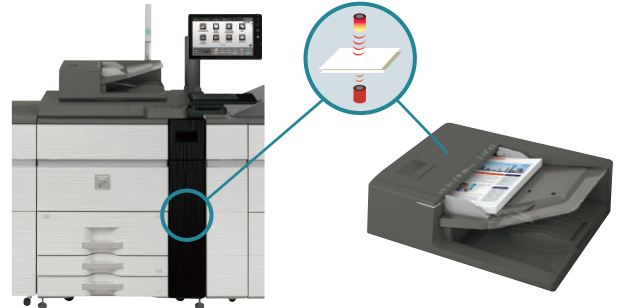

The MFP is built for durability and easy maintenance. It features smart built-in systems and options that help to minimise downtime and improve productivity.

Highly Rigid Main Frame A highly rigid support frame isolates and protects critical machine components in the MFP, ensuring increased durability and reliability. The unit can withstand heavy use in locations where rapid, high-volume output is demanded.

Air-feed System For smooth paper handling and travel, an air-feed system on the optional MX-LC13 N Large Capacity Trays minimises paper jams and the feeding of more than one sheet at a time.

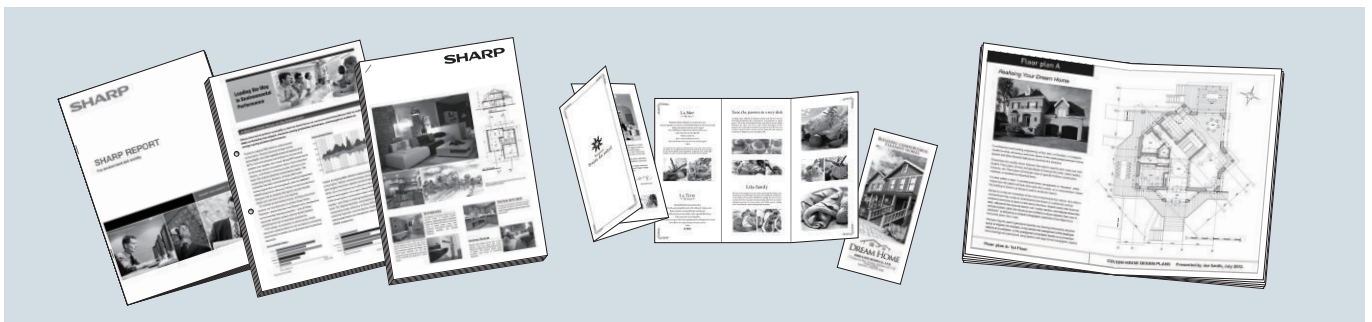

Multi-feed Detection System A precision-engineered Multi-Feed Detection System on the MFP employs ultrasonic technology to detect misfeeds in the DSPF and the paper feed section of the paper trays.

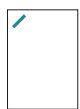

Professional-quality In-line Finishing Options

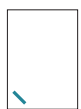

A range of finishing options work to automate time-consuming finishing tasks. Options are available to suit a variety of workplaces and applications.

Fiery® Server for Outstanding Quality and Efficiency

Paired with the an industry-leading Fiery external server, this MFP becomes a powerful integrated solution for managing professional in-plant and busy on-demand printing environments. This winning combination offers the following benefits, to name just a few:

- Easily manage jobs with Fiery Command WorkStation® fully integrated at the MFP's touchscreen for unmatched control and ease of use
- Deliver high-impact documents that maintain consistent results page after page
- Process large, complex jobs at speeds of 120/105 ppm that will exceed your expectations
